

WORKSHEET: Drug Categorization

This worksheet is designed to help you organize your pharmacy medication inventory by creating categories for each classification of medication that you prescribe. Use this worksheet to write down the list of categories you wish to create for medications (example: Antibiotics, ART Medications, Anti-Inflammatories, etc). After consensus between the pharmacy team and the prescribers, submit the information from this list to the online Drug Categorization Form that is found on the emr^{XL} Launch Team Resources Website.
